

# Virtru for Google Workspace

## Virtru Global Data Protection for the Google Applications You Use Every Day

Virtru extends data-centric protection everywhere you need it. Securely send messages and files via Gmail, protect files in Drive, collaborate in Docs, Sheets, and Slides, and communicate via Google Meet while improving data security, meeting compliance, and preventing third-party (including Google) access. Virtru provides a single global framework to manage and protect your data across the Google ecosystem.

Virtru is recommended by Google as an encryption provider for Google Workspace. Virtru enhances your data sharing capabilities to support the confidentiality of your data no matter where it travels or who it's shared with. And we support your migration to Google Cloud with encryption key management for data in GCP.

## Why Partner with Virtru

Enhance any digital workflow with encryption, compliance management, and access controls.

Once you deploy one of our Google solutions, you can quickly add additional functionality. Our services are built to streamline installation and ease of use across your organization.

### Secure Send, Upload, and Sharing for Gmail and Drive

- Encrypt and decrypt messages and apply access controls directly within Gmail.
- Securely upload files into Drive (including PDF, Word, Excel, PowerPoint, JPEG, PNG, and CAD) and download to share externally.

### Message and File Access Controls

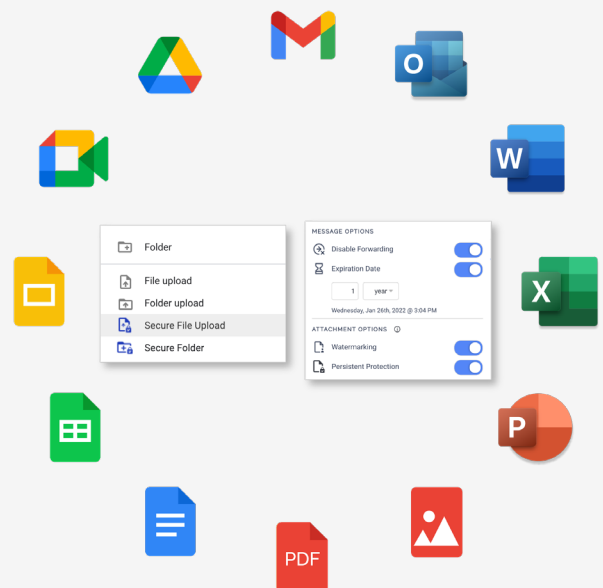

- Expire messages, control forwarding, view read receipts, and add watermarks to files.
- Immediately revoke access at any time.
- Retain access control even after someone downloads a file locally to their desktop.

### Key Management for Client-side Encryption

- Support heightened privacy in Docs, Sheets, Slides, and the Google Drive File Stream desktop app, as well as encrypted calls (media stream) and video messages in Google Meet.

### Protect Additional SaaS Apps

- Extend data protection and control to other SaaS applications – like CRM (e.g. Salesforce) and analytics tools – for organization-wide protection.

## Always Maintain Control and Visibility into Your Data, and Achieve True Privacy

### Email Rules\*

Your Virtru extension detects sensitive content automatically. You decide what actions you want to take to protect your content.

\*Virtru DLP is supported on G Suite, Gmail, Microsoft Outlook Web App for Office 365, and Microsoft Outlook 2010, 2013, and 2016.

When I type these text patterns... (1)	Encrypt	Warn	Log Only (1)	Enabled

[SAVE CHANGES](#)

- Enable automatic protection with data loss prevention (DLP) enforcement.
- Set DLP rules for patterns and keywords, or use our pre-built rule packs.
- View which recipients have accessed or forwarded encrypted emails and files.
- Download detailed audit data on a regular basis.

## Additional Benefits of Partnering with Virtru

### Ensure Ease of Use for All

Integrate with existing Google workflows, without breaking search or e-discovery. Admins set up within minutes, users encrypt with the click of a button, and recipients have a seamless experience without creating new accounts or portal passwords.

### Support Compliance

Have full control over the encryption of data in Google Cloud and Workspace or shared via other workflows. Host your own encryption keys to help support your compliance with ITAR, EAR, CJIS, IRS 1075, HIPAA, GDPR, etc.

### Access Data Intelligence

Review data insights in one place to see what you're protecting, where it's going, and who has accessed it, even as it's shared externally. Integrate with your SIEM to strengthen threat response and compliance reporting.
